

The flood hazard map for Joso City provides information about potential flooding in Joso City that could occur as a result of water level rises in the Kokai, Kinu and Tone rivers which flow through or along the city, and maps (created by the Ministry of Land, Infrastructure, Transport and Tourism) of areas where flooding could occur due to rupture of river levees. Information includes possible areal extent and depth of inundation, evacuation areas, and so on.

During times of heavy rains, you should pay attention to how the rain is falling and conditions that may cause flooding. If you sense danger, you should evacuate your area as soon as possible.

Please note that even in areas on the map that are not color coded for flooding, particularly heavy rainfall or changes in land use could result in flooding.
