

● Dangerous places during an evacuation

There are many hidden dangers on the road to the shelter. The hazard map shows some typical danger spots, but you should observe the things around you every day so that you will be aware of dangerous places during heavy rains.

◆ Areas near waterways

There are places near waterways that do not have barriers like guardrails. During a flood, it may be impossible to tell where the waterway is, and there is a danger of being washed away.

◆ Areas behind levees or surrounded by embankments

Areas behind levees or surrounded by large road embankments, etc., have poor drainage and easily collect water. During a flood, the water there may be deeper than in surrounding places.

◆ Places in danger of landslide or similar disaster

"Cliffs" may collapse during a heavy rain. Please stay away from cliffs steep slopes during heavy rains. Also, if your home is near a steep slope or cliff, please evacuate as soon as possible!
