

## ● The force and type of rainfall

1-hour rainfall	Forecast terms	Images that people receive	Conditions under which disasters occur
10~20mm	Somewhat strong rain	Downpour	Even this degree of rainfall requires attention if it lasts a long time.
20~30mm	Strong rain	Torrential rain	Gutters, sewers and small streams can overflow, and small cliffs can start to collapse.
30~50mm	Heavy rain	Rainfall that would "knock over a bucket"	Landslide, rockfall, etc. can easily occur, so prepare to leave dangerous areas.
50~80mm	Extremely heavy rain	Cascading like a waterfall	Water flows out of manholes. Rocks and dirt are swept away by water. Many disasters can occur.
80mm~	Severe rain	Oppressive feeling, difficult to breathe. Sense of fear.	Large-scale disaster appears imminent. Extreme caution required.
